

Deltex Sailing DS CAT 525

Deltex Sailing Catamaran 525 was designed by Goran Lescic as a sport and pleasure catamaran.

DS Cat is a result of our own development and high technology manufacture. Hulls are made of fiberglass reinforced with vinyl ester resins in vacuum technique. Mast, boom and connecting consoles are made in carbon-epoxy technology.

Due to the simple control and minimal maintenance DS Cat 525 is suitable for individual sailing, sailing in clubs, in team-building as well as in sailing regattas and for rent.

The Cat mainly attracts the younger population or tourists which require more from holidays. The basic model is designed for recreational sailing, but in sport variant is ready for extreme sailing.

Permitted capacity in recreational sailing is 4 persons (450 kg), and in sport variant is scheduled for 2 crew members. Catamaran is collapsible and easily asunder and assembles.

Elvstrom Sobstad from Split, Croatia, developed and manufactured the sails especially for DS Cat. Harken sailing carbon equipment guarantee the safety and durability in use.

Technical Description:

Length:	5.25 m
Overall length:	5.6 m
Width:	2.7 m
Weight:	approx 150 kg, the mass of hull is about 40 kg each
Mast (carbon):	7.2 m with a cross and boom and relevant equipment for the management of sail and jib
Main sail:	13 m ² Elvstrom SOBSTAD catamaran with hardened, Dacron
Jib:	Elvstrom SOBSTAD 7 m ² , Dacron, system autovirante Harken
